

Premium Deck Stain – Data Sheet

Description:

Everest Premium Deck Stain is a water-based; oil modified polyurethane stain formulated for all types of timbers including exterior decking. The penetrating semi-transparent finish delivers excellent UV resistance combined with water repellence and anti-mold properties. Based on European technology, our **Premium Deck Stain** conforms to EU Directive 2004/42/EC Phase2 with less than 30gms/litre of VOC.

Physical Properties

Resin Type:	Oil modified Polyurethane
Solvent:	Water
Colour:	Range of oxide based semi-transparent colours
Finish:	Low Sheen
Drying Time:	2-3 hours
Recoat Time:	Immediate, wet on wet
Dry Film Thickness:	Not applicable
No. of Coats:	1 or 2 depending on depth of colour required
Theoretical Coverage:	4-12m ² per litre depending on type of timber and porosity.
Primer Needed:	No
Thinning & Cleaning:	Thinning not required, clean up with water when wet, mineral tups when dry.

Performance:

- ✓ Excellent penetrating properties
- ✓ High UV protection
- ✓ Excellent water repellent properties
- ✓ Contains anti-mold additives
- ✓ Fast drying
- ✓ Can be used on all exterior grade bare timber

Limitations:

- As a result of water repellent properties a 2nd coat may take much longer to dry if not applied wet on wet. If 2nd coat required after drying, light sanding is recommended or allow weathering for at least 3 months.
- Previously painted or vanished timber must be sanded back to bare wood.
- Do not apply if temperature is expected to fall below 5°C or dew is expected within 3 hours of application.

Substrate Preparation:

Although the information and recommendations set down here in this document are presented in good faith and believed to be correct, Commercial Coating Manufacturers Ltd makes no representation as to the completeness and accuracy thereof.

No representations or warranties expressed or implied or merchantability, fitness for purpose or any other nature are made hereunder with respect to information or the product to which the information or Technical Data Sheet refers.

New Timber:

- It is recommended that all hard woods and high resin content timbers be weathered for a minimum of 4 weeks before staining. Regular rinsing with water will assist with weathering.
- **New Timber continued:**
- LOSP treated pine should be weathered for 2 weeks prior to application.
- Hard shiny surfaces on new timber must be sanded to allow full penetration of **Aquathane**.

Previously Stained or oiled timber:

- These may be re-stained following suitable cleaning and preparation.
- Ensure existing stained or oiled surfaces are receptive to our **Premium Deck Stain** by checking absorbance by splashing water on to the surface. If the water beads on the surface or is not quickly absorbed the original stain must be removed or a patchy finish will result.
- Patchy and unsound surfaces must be stripped to bare wood before staining.

All Timbers:

- Ensure all surfaces are cleaned and free from dirt, wax grease and mould by using appropriate cleaners.
- Sand along the grain using 180-240 grit paper. Remove all sanding dust
- Rinse whole surface with clean water and allow to dry before application.
- Where necessary fill cracks and nail holes appropriate exterior grade filler or putty. After the filler has dried sand and remove dust.

Application:

- Stir contents thoroughly before and regularly during use. Boxing is recommended if more than 1 container at a time is being used.
- Apply with clean dry high quality brush or applicator pad. Pay special attention to end grain, cracks and exposed edges.
- Apply along the full length of 2-3 boards at a time working the stain well into the timber. Keep a wet edge by working back in to the stained area while it is still wet.
- Apply only as much stain as the timber will absorb and do not allow the stain to pool in low areas.
- Second coat must be applied wet on wet before moving on to the next 2-3 boards.
- Allow finished job to dry for a minimum of 24 hours before subjecting to light foot traffic.

Special Notes:

- All exterior timber stains require regular maintenance to retain their appearance.
- We recommend re-coating every 2-3 years or as soon as the timber shows signs of weathering.
- Areas of high foot traffic and more exposed positions may weather faster than surrounding areas.

Although the information and recommendations set down here in this document are presented in good faith and believed to be correct, Commercial Coating Manufacturers Ltd makes no representation as to the completeness and accuracy thereof.

In no event will Commercial Coating Manufactures Ltd be responsible for damages of any nature what so ever resulting from the use or reliance upon this information. No representations or warranties expressed or implied or merchantability, fitness for purpose or any other nature are made hereunder with respect to information or the product to which the information or Technical Data Sheet refers.

- Porous and open grained timber may weather faster than dressed substrates.
- Some dense non porous hardwoods may require early re-staining before attaining full durability.
